feed a fixed liquid glass volume or "gob" 32 into a mold. Thus, the mold receives molten glass. In both instances, the molten glass is allowed to plasticize before further processing in an annealing oven. (See columns 5 - 6, particularly column 5, lines 17 - 31 and column 5, lines 54 - 61). Long fails to teach an adapter for delivering an amount of molten glass from a plurality of glass melting furnaces each at a different location (relevant to claims 13 and 27). Failing to teach these features, Long cannot anticipate the claimed invention. If the Examiner maintains this rationale for rejecting the claims, Applicant respectfully submits that the Examiner point out specifically in Long where Long teaches that the mold can deliver an amount of molten glass from any furnace to any molten metal bath.

In view of the above remarks, favorable reconsideration is courteously requested. If there are any remaining issues which can be expedited by a telephone conference, the Examiner is courteously invited to telephone counsel at the number indicated below.

The Commissioner is hereby authorized to charge any fees associated with this response or credit any overpayment to Deposit Account No. 13-3402.

Respectfully submitted,
